

VIII. Mini Project - Movie & OTT Analytics

AIM

To clean, process, analyze, and visualize movie and OTT platform data using Python, and build static visualizations and interactive dashboards using Python, Power BI, and Tableau to derive meaningful movie-industry insights.

DOMAIN

Movie and OTT Analytics

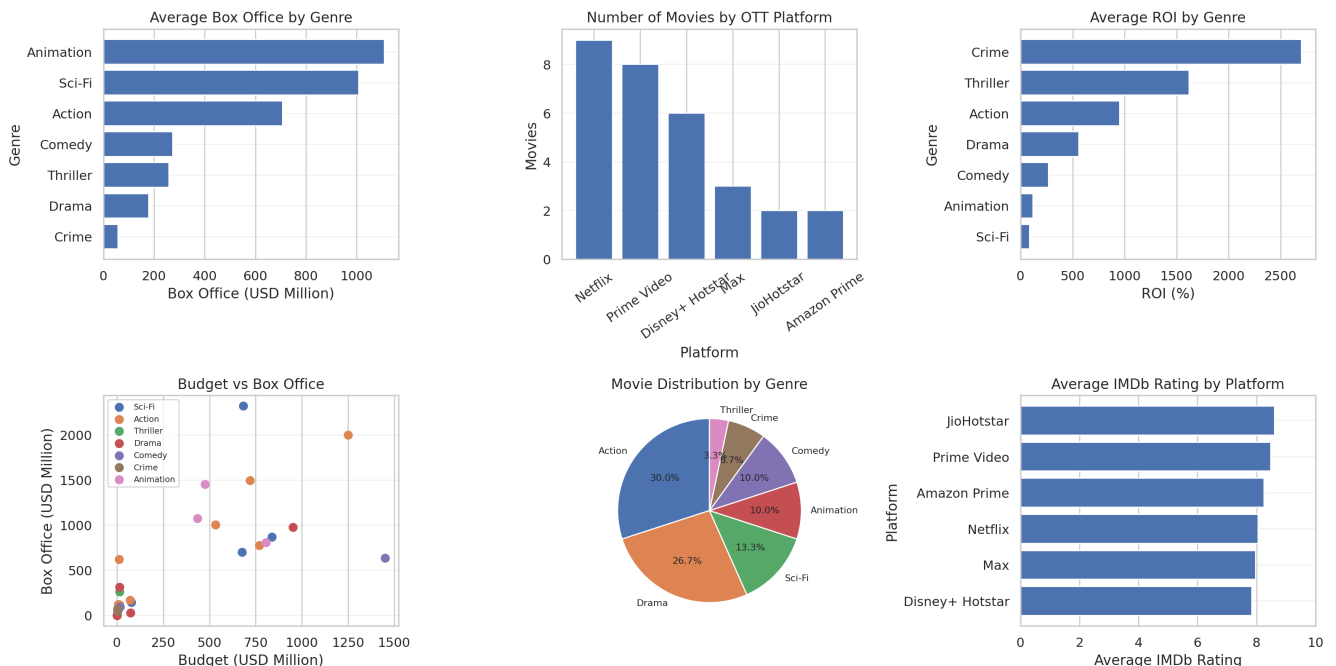

PROBLEM STATEMENT

Movie and OTT datasets contain information about movies, genres, streaming platforms, ratings, directors, runtime, budget, box office performance, countries, and languages. There is a need for a data-driven visualization system to analyze movie performance, OTT platform distribution, audience ratings, genre trends, and commercial performance.

OUTPUT

Python:

Movie & OTT Analytics

PowerBI:

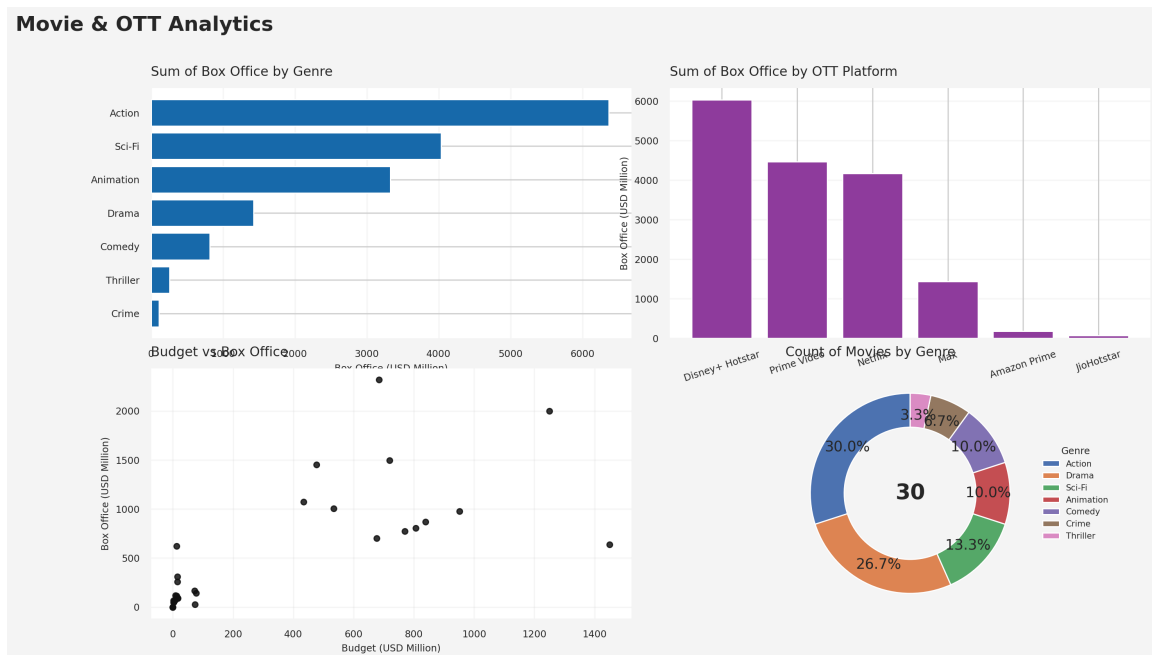

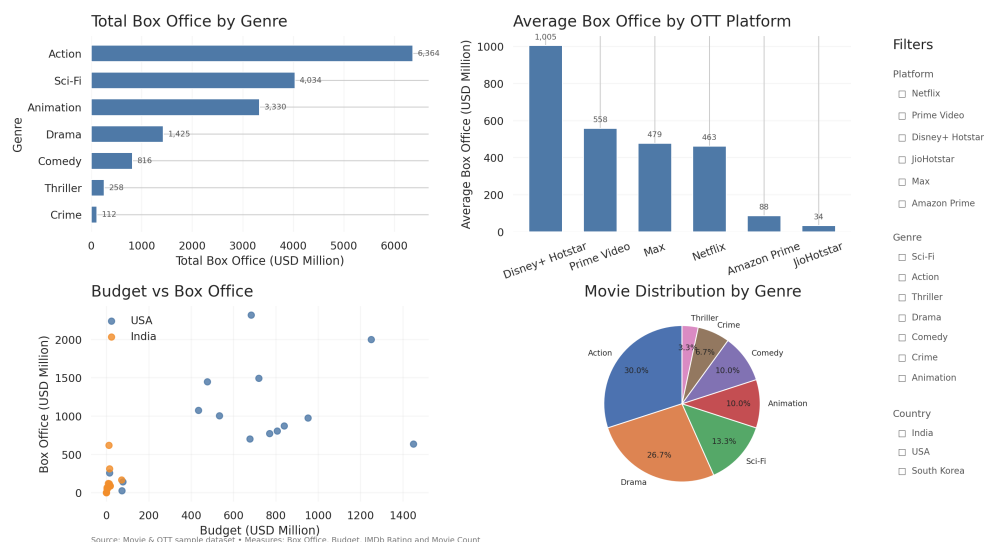

Tableau:

Movie & OTT Analytics Dashboard

RESULT

Thus, the Movie & OTT Analytics mini project was designed and the given program was written and executed successfully using Python, Power BI, and Tableau. The project provides visual analysis of movie ratings, OTT platforms, genres, budgets, box-office performance, and movie distribution.
